Foreword

The Directorate of Economics & Statistics, Bihar has been bringing out the estimates of State Domestic Product since 1948-49, and updating them from time to time as per the guidelines and methodology provided by the National Accounts Division, Central Statistical Office, Ministry of Statistics & Programme Implementation, Government of India.

The State Domestic Product (SDP) represents the value of all goods and services produced within the geographical boundaries of the State in a particular year. It is the most important economic indicator used to measure the economic growth of the State. Its derivative, the Per Capita Income (PCI) measures the average standard of living of the people.

It is a matter of pleasure for me to release the second issue of this publication on estimate of the State Domestic Product of Bihar pertaining to the period 2004-05 to 2010-11 (Advance) in the New Series with base year 2004-05. This publication also contains District Domestic Product for the years 2004-05 to 2007-08 at Current & Constant (2004-05) prices and some additional tables prepared, following the guidelines & methodology provided by the Central Statistical Office (NSD), New Delhi.

Co-operation and assistance extended by various Departments of the State Government and the Central Statistical Office (NSD), New Delhi in bringing out the estimates included in this publication is deeply acknowledged.

I would like to place on record my appreciation of the hard work put in by the Officers and Staff members of the State Income Unit to ensure timely publication of this issue.

It is hoped that this publication will be useful to Policymakers, Planners and Research Scholars.

Creative suggestions for improvement of this publication are welcome.

Acknowledgement

The Directorate of Economics & Statistics (DES) Bihar is the nodal agency for compiling the State Domestic Product and related Aggregates as per the guidelines and methodology provided by the Central Statistical Office (CSO), Government of India. It has been bringing out estimates for some of the Aggregates since 1948-49 and updating them from time to time.

The CSO introduced the new base year 2004-05 in Jan.2010 and the DES, Bihar brought out the first brochure incorporating State Domestic Product in 2010. This is the second issue in that continuation containing the estimates of SDP for 2004-05 to 2010-11 (Adv.) and DDP for 2004-05 to 2007-08 both at the current and constant(2004-05) prices.

Thanks are due to various sections of DES, Departments of the State Government, Departmental Undertakings, and Central Ministries for their co-operation in making available the requisite data for compilation.

I place on record my deep appreciation of the sincere efforts put in by Sri H. C. Shastri, A. S. O. along with Sri S.K.Sinha A.S.O.and staff of State Income Unit in compiling the estimates and completing the publication in time under the guidance of Sri A.K. Sinha J.D. and supervision of Sri B. D. Pandit, Deputy Director.

We will welcome suggestions from users for improvement in the coverage and/ or presentation of estimates included in this publication.

Chapter-1

Introduction

The development of official estimates of **State Income** and related aggregates like **Savings** and **Capital Formation** to meet the requirements of planning and policy purposes began in 1949, when the Directorate of Economics and Statistics (DES), Bihar initiated compilation of **State Domestic Product (SDP)** following the methodology adopted by the **National Income Committee**. It was envisaged as a measure in monetary terms of the volume of all goods and services and accounted without duplication production within the geographical boundaries of the State during a given period of time, generally taken as the financial year.

The DES, Bihar has brought out earlier six series of **SDP** implementing the methodology and guidelines recommended by the **Central Statistical Organisation**- each series being gradual improvement over the previous series in terms of coverage, data sets and methodology. The present series with the base year 2004-05 has been compiled as per norms and guidelines set by the CSO in January, 2010, and are in consonance with comparable discussion held in August 2010.

The estimates of **State Domestic Product** are prepared at **Current** and **Constant** prices. The estimates of **SDP at current prices** are obtained by evaluating the product at current prices prevailing during the year. This, however does not reveal actual economic scenario because these contain the combined effect of (i) the changes in volumes of goods and services and (ii) the changes in the prices of goods and services. In order to eliminate the effect of price changes/ inflation, the estimates of SDP are also prepared by evaluating the goods and services at the prices prevailing in the fixed year known as base year and are known as the estimates of **State Domestic Product at constant prices**.

The estimates of SDP are prepared for all the sectors of economy both in terms of Gross and Net basis. The difference between the two is that in the gross estimates, no deduction is made for **Consumption of Fixed Capital (CFC)**, which takes place in the process of production, whereas in the net estimates, CFC is subtracted from the gross value figures.

Net State Domestic Product is taken as the State Income, since the estimates for the net factor income beyond the state's boundaries is not available. Again, capital is one of the primary factors used in production and this results in the **Consumption of the Fixed Capital** and hence, a reduction in the economic life of the capital. In other words, the capital depreciates as a result of its use in the process of production. The CFC measures the replacement value of that part of the capital stock, which has been used up in the production process during the year.

For the purpose of estimation of SDP, the State Economy is classified into thirteen broad sectors and estimates for these sectors are prepared by adopting one or more of the following approaches:

(I) Production Approach

(II) Income Approach

(III) Expenditure Approach

- (I). **Production Approach:-** The sum of economic value of all goods and services produced within the state during the year after deducting the inputs consumed in the process of production is considered. This approach is followed in **Agriculture/ Livestock/ Forestry/ Fishing/ Mining & Quarrying and Manufacturing (Registered)**.
- (II) **Income Approach:-** The income accrued to the factors of production, namely land, labour, capital and entrepreneurship in the form of rent, salaries and wages, interest and profit, is taken into consideration in the estimation of value added. This process is followed in :
- a) **Manufacturing (Un-registered)**
 - b) **Electricity, Gas & Water Supply**
 - c) **Trade, Hotel & Restaurants**
 - d) **Transport, Storage & Communication**
 - e) **Banking and Insurance**
 - f) **Real Estate, Ownership of Dwelling, Legal and Business services**
 - g) **Public Administration**
 - h) **Other Services**
- (III) **Expenditure Approach:-** This method is based on the measurement of income at the stage of disposal. In this method, all that is produced, is either ultimately consumed or part of it is saved for further consumption or further production of goods and services. Thus the money value of consumption expenditure plus savings gives the income. This approach is used in estimating income from **Construction sector**.

Chapter-2

New Series of State Domestic Product

Bihar is one of the leading states that prepared the first official estimates of state domestic product with base year 1948-49 following the methodology recommended by the National Income Committee under the chairmanship of Prof. P. C. Mahalanobis, and has the longest series from 1948-49 onwards.

With the gradual improvement in the availability of basic data over the years, a comprehensive review of methodology has constantly been undertaken by the Central Statistical Organisation with a view to updating the data base and shifting the base year (i.e. the year selected for examining the performance of the economy in real terms) to a more recent year. Base years were shifted from 1948-49 to 1960-61 in August 1967, from 1961-61 to 1970-71 in January 1978, from 1970-71 to 1980-81 in February 1988, from 1980-81 to 1993-94 in February 1999, from 1993-94 to 1999-2000 in January 2006 and from 1999-2000 to 2004-05 in January 2010.

2.1. Need of New Base Year

The reason for periodically changing the base year of the State Domestic Product is to take into account the structural changes which have been taking place in the economy and to depict the true picture of the economy through macro aggregates. Improvement in terms of coverage of activities, incorporation of latest datasets and latest international guidelines are also incorporated along with shifting of the base year.

2.2. Guiding Principles for New Series

The three major components influencing the present revision exercise include (i) Revision of base year to a more recent year (for meaningful analysis of structural changes in the economy in real terms), (ii) Complete review of the existing data base and methodology employed in the estimation of various macro-economic aggregates including choice of the alternative databases on individual subjects and (iii) to the extent feasible, implementing the recommendations of the System of National Accounts (SNA), 1993 and 2008 prepared under the auspices of the Inter Secretariat Working Group on National Accounts comprising of the European Communities (EUROSTAT), International Monetary Fund (IMF), Organisation for Economic Cooperation and Development (OECD), United Nations and the World Bank.

2.3. Choice of 2004-05 as the Base Year

In the past, National Accounts Statistics were revised decennially changing the base to a year, which ends with 1. It was primarily because in the base year estimates of national accounts aggregates, the information on work force plays an important role and work force estimates were obtained from the Population Census conducted decennially in the years ending with 1. This practice continued upto the series with base year 1980-81. Since then, the CSO started using the work force estimates from the results of Quinquennial Employment Surveys of National Sample Survey Organisation (NSSO), which are conducted once in every five years, and consequently started revising the base years of national accounts statistics once in every five years coinciding with the years for which the NSSO conducts the Quinquennial Employment and Unemployment Surveys.

In continuation with this practice, the new series of national accounts has been released with base year 2004-05 on 29th January, 2010 using the work force data from the results of NSS 61st round (2004-05) on Employment and Unemployment Survey.

2.4. Use of results of recent Surveys , Censuses and Type Studies

In the new series, efforts have been made to make use of as much current data as possible. Further, the results of latest available surveys have also been made use of. Some of the important sources of data, which have been used in the new series, are as follows:

- i.* NSS 61st round (2004-05) on employment and un-employment and consumer expenditure;
- ii.* NSS 62nd round (2005-06) on un-organised manufacturing;
- iii.* NSS 63rd round (2006-07) on services sectors;
- iv.* All India Livestock Census, 2003; NSS 59th round (2002-03) on All India Debt and Investment Survey;
- v.* Population Census, 2001; and
- vi.* Fourth All India Census of Micro, Small and Medium Enterprises, 2006-07.

Further, the results of various studies undertaken by the CSO and State Governments and also the CSO's input output transactions tables and the Ministry of Agriculture's Cost of Cultivation Studies have been used in the new series for updating the rates and ratios used to estimate the production/ consumption of fodder, market charges paid by the farmers, yield rates of meat, meat products and meat by products of different categories of animals, input rates for agriculture and forestry and the trade and transport margins.

2.5. Improvements in coverage and procedures of compilation

2.5.1 The improvements in terms of coverage have been mainly the inclusion of production of industrial wood from trees outside forests (TOF), and fodder from forest sources in the GSDP estimates.

The important procedural changes made in the new series are the incorporation of data on

- (i) Area and production of crops as finalized by the States/ UTs for the final estimates of GSDP
- (ii) Consumption of fertilizers in agriculture, as provided by the Fertilizer Association of India in lieu of data on dispatches of fertilizers being used at present from the same source in the estimation of inputs of agriculture sector
- (iii) Results of the CSO's Annual Survey of Industries (ASI) in place of the index of industrial production (IIP) for estimating the GSDP of registered manufacturing
- (iv) Labour input on the basis of work-place as against the present practice of using labour input data on the basis of location in respect of estimation of GSDP of unorganised manufacturing and services and
- (v) Labour input for the organised sector from the NSS Employment and Unemployment Surveys in place of the present source, namely the Annual Employment Market Intelligence (EMI) of the Directorate General of Employment and Training (DGET), Ministry of Labour.

2.5.2 Other procedural changes in the new series include (i) treating R & D expenditures in public sector as capital expenditures in line with the recommendations of 2008 SNA; (ii) adopting the declining balance (of life of assets) method for estimating the consumption of fixed capital and capital stock; (iii) adopting the user cost approach for estimating the services of owner occupied dwellings in rural areas as against the present practice of imputing these services on the basis of rent per dwelling; (iv) estimating the output communication in nominal terms on the basis of data available on average revenue per user (ARPU); and (v) improvements in the estimation of output, consumption expenditure, saving and capital formation of autonomous government bodies and local bodies by analysing their accounts on a sample basis.

2.6. *Improvements of 1993 and 2008 SNA*

While undertaking the new base year exercise, efforts have also been made to implement the recommendations for the System of National Accounts (SNA) 1993 and 2008 to the extent data are available. It may be mentioned here that the compilation of national accounts in India are on 1993 SNA basis. Some of the recommendations which presently form part of the new series are :

- i.* treating R & D expenditures in public sectors as capital expenditures in line with the recommendations of 2008 SNA;

- ii.* adopting the declining balance (of life of assets) method for estimating the consumption of fixed capital and capital stock.
- iii.* adopting the user cost approach for estimating the services of owner occupied dwellings in rural areas as against the present practice of imputing these services on the basis of rent per dwelling;
- iv.* treating the construction component and machinery/ transport outlay of Defence capital account as capital formation, which was earlier being treated as intermediate consumption.

2.7. Estimation of Work Force for use in New Series

2.7.1. In the absence of annual enterprises surveys, the GVA estimates in respect of (i) un-organised segments of manufacturing and services sectors, and (ii) for some segments of private organised services sectors, are compiled indirectly through labour input method using the benchmark-indicator procedure. In this procedure, the benchmark GVA estimates are initially prepared at detailed activity level for the base year of national accounts series using the estimated labour input engaged and the value added per worker (VAPW) in the activity. For subsequent years, the GVA estimates are extrapolated with appropriate proxy indicators relevant to the economic activity. Therefore, for estimating the GVA for these segments of economy, data on labour input and VAPW are required for the base year. It is pertinent to mention here that the labour input used in the national accounts related to the number of jobs performed in the economic activities, rather than the number of persons employed. This means that a person performing two jobs is counted twice in the labour input procedure adopted in the national accounts. This labour input corresponds conceptually to the labour input used in the estimating the value added per worker from the NSS enterprise surveys.

2.7.2. In the new series, the estimates of value added are compiled at detailed activity level, known as 'compilation categories'. These compilation categories are determined by regrouping the economic activities at 4 and 5 digit level described in the National Industrial Classification (NIC), 1998, which, in turn follows the International Standards Industrial Classification of All Economic Activities, Rev.3 (ISIC Rev.3) of the United Nations. As per the recommendations of Advisory Committee, the same compilation categories of 1999-2000 series have been used for the base year 2004-05 as well as for the sake of comparability of the data between the two series.

2.7.3. For the new series, the estimates of Labour Input (LI) for the public, private corporate and unorganised sectors, separately for rural and urban areas, have been derived compilation category-wise from the results of NSS 61st round (2004-05) of Employment Unemployment Survey (EUS) and population projections as on 1.10.2004 of the office of the Registrar General of India (RGI). In accordance with the decisions of the Advisory Committee, the estimates of LI for the public, private corporate and unorganised sectors have been derived on the basis of place of work in rural and urban areas rather than on the basis of place of residence of workers. However, while adopting this decision, it was observed that a number of workers had no fixed place of work. Therefore, these workers who had no fixed place of work were redistributed on the basis of their place of residence. Yet another change made in the procedure of estimation of labour input in the new series relates to the source of data for estimating the labour input in the private corporate sector. Previously (till the 1999-2000 series), the labour input for this sector was estimated from the data provided by the Directorate General of Employment and Training (DGET) through their Annual Employment Market Intelligence (EMI) survey. In the new series, the labour input data for the private corporate sector has also been estimated from the results of NSS Employment and Unemployment Survey.

2.7.4 The estimates of overall labour input have been adopted in the new series for the compilation categories. For the compilation categories relating to manufacturing sector, labour input for registered sector is available from the data of Annual Survey of Industries (ASI) in 2004-05. The estimates of labour input for unregistered manufacturing segment covered under MSME have been derived from the 'Fourth All India Census of Micro, Small and Medium Enterprises (MSME), 2006-07. The labour input for the unregistered manufacturing sector (not covered under MSME definition) has been derived by subtracting the labour input in ASI and MSME from the total labour input in the manufacturing activity. For all other compilation categories, the labour input has been estimated separately for private corporate and unorganised sectors from the results of NSS 61st round (2004-05) on Employment and Unemployment.

2.8. *Estimates of Value Added Per Worker (VAPW)*

The estimates of VAPW for the unorganised and some private organised segments of manufacturing (non-SSI part) and services sectors have been compiled from the detailed data available from the NSS 62nd round (2005-06) on manufacturing enterprises in the unorganised

sector, and NSS 63rd round (2006-07) on unorganised enterprises in the service sector (excluding trade). The estimates of VAPW at the compilation category level have been arrived at as a ratio of the gross value added to the total employees in the particular compilation category. The compilation category wise estimates of VAPW are given in the tables included under the respective sectors.

AN OVERVIEW

(I) Per Capita GSDP:

The estimates when studied in relation to the total population of the state indicate the level of per capita of Gross Output of goods and services available or standard of living of the people in the state. The estimates of Per Capita GSDP at current and constant (2004-05) prices along with percentage change over previous year are shown in the following Table No-1.

Table No.-1
PER CAPITA GSDP OF BIHAR
AT CURRENT AND CONSTANT (2004-05) PRICES

Year	At Current Prices		At Constant (2004-05) Prices	
	Per Capita (Rs.)	% Change over Previous Year	Per Capita (Rs.)	% Change over Previous Year
2004-05	8637	-----	8637	-----
2005-06	9112	5.50	8573	(-) 0.74
2006-07	11115	21.98	9965	16.24
2007-08	12713	14.38	10643	6.81
2008-09 (P)	15420	21.29	11854	11.37

2009-10 (Q)	17590	14.07	12683	6.99

(II) Sectoral Contribution:

Sectoral contribution of Gross State Domestic Product gives an idea of the relative position of different sectors in the economy over a period of time. This not only indicates the real structural changes taking place in the economy but also facilitates formulation of the plans for overall economic development. The following Table No.-2 shows the sectoral composition with percentage both at current and constant (2004-05) prices.

Table No.-2
COMPOSITION OF GROSS STATE DOMESTIC PRODUCT BY BROAD SECTORS

GSDP 2004-05 and 2010-11 (Adv.) of Bihar by Industry At Constant (2004-05) Pirces

(III) District Domestic Product:

Industry wise percentage distribution of Gross District Domestic Product is given in the following Table No.-3. This gives an overall idea of the economic contribution of the districts in the state economy. The shaded figures indicate that the percentage contribution of that sector in that district is less than its share in GSDP.

GLOSSARY OF TERMS

(Source: System of National Accounts, 1993)

- Assets - Assets are entities that must be owned by some unit, or units, and from which economic benefits are derived by their owner(s) by holding or using them over a period of time.
- Base period - The period that provides the weights for an index is described as the base period.
- Basic price - The basic price is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any tax payable, and plus any subsidy receivable, on that unit as a consequence of its production or sale; it excludes any transport charges invoiced separately by the producer.
- Capital stock - gross - Gross capital stock is the value of all fixed assets still in use at the end of an accounting period, at the actual or estimated current purchasers' prices for new assets of the same type, irrespective of the age of the assets.
- Capital stock - net - The sum of the written-down values of all the fixed assets still in use at the end of an accounting period is described as the net capital stock.
- Changes in inventories (including work-in-progress) - Changes in inventories (including work-in-progress) are measured by the value of the entries into inventories less the value of withdrawals and the value of any recurrent losses of goods held in inventories.
- Classification of individual consumption by purpose (COICOP) - The classification of individual consumption by purpose (COICOP) is a classification used to identify the objectives of both individual consumption expenditure and actual individual consumption.
- Classification of the functions of government (COFOG) - The classification of the functions of government (COFOG) is a classification used to identify the socio-economic objectives of current transactions, capital outlays and acquisition of financial assets by general government and its sub-sectors.

Compensation of employees	- Compensation of employees is the total remuneration, in cash or in kind, payable by enterprises to employees in return for work done by the latter during the accounting period.
Computer software	- Computer software consists of computer programs, program descriptions and supporting materials for both systems and applications software.
Constant prices	- Constant prices are obtained by directly factoring changes over time in the values of flows of goods and services into two components reflecting changes in the prices of the goods and services concerned and changes in their volumes (i.e. changes in "constant price terms").
Consumption	- Consumption is an activity in which institutional units use up goods or services; consumption can be either intermediate or final.
Consumption of fixed capital	- Consumption of fixed capital represents the reduction in the value of the fixed assets used in production during the accounting period resulting from physical deterioration, normal obsolescence or normal accidental damage.
Cultivated assets	- Cultivated assets are livestock for breeding (including fish and poultry), dairy, draught, etc. and vineyards, orchards and other plantations of trees yielding repeat products that are under the direct control, responsibility and management of institutional units.
Defined benefit pension plans	- Defined benefit pension plans are those in which the level of pension benefits promised to participating employees is guaranteed; benefits are related by some formula to participants' length of service and salary and are not totally dependent on either the participants' contributions or the assets in the fund.
Depletion of natural economic assets	- The depletion of natural economic assets is the reduction in the value of deposits of subsoil assets, natural forests, fish stocks in the open seas and other non-cultivated biological resources as a result of the physical removal and using up of the assets.
Depreciation	- Depreciation as usually calculated in business accounts is a method of allocating the costs of past expenditures on fixed assets over subsequent accounting periods; note that the depreciation methods favoured in business accounting and those prescribed by tax authorities almost invariably deviate from the concept of consumption of fixed capital employed in the SNA and so the term "consumption of fixed capital" is used in the SNA to distinguish it from "depreciation" as typically measured in business accounts.

Disposable income	- Disposable income is derived from the balance of primary incomes of an institutional unit or sector by adding all current transfers, except social transfers in kind, receivable by that unit or sector and subtracting all current transfers, except social transfers in kind, payable by that unit or sector.
Disposals	- Disposals of assets (inventories, fixed assets or land or other non-produced assets) by institutional units occur when one of those units sells any of the assets to another institutional unit.
Domestic output	- Domestic output is output produced by resident enterprises.
Double deflation	- Double deflation is a method whereby gross value added is measured at constant prices by subtracting intermediate consumption at constant prices from output at constant prices; this method is feasible only for constant price estimates which are additive, such as those calculated using a Laspeyres' formula (either fixed-base or for estimates expressed in the previous year's prices).
Durable good	- A durable good is one which may be used repeatedly or continuously over a period of more than a year, assuming a normal or average rate of physical usage.
Dwellings	- Dwellings are buildings that are used entirely or primarily as residences, including any associated structures, such as garages, and all permanent fixtures customarily installed in residences; movable structures, such as caravans, used as principal residences of households are included.
Entertainment, literary or artistic originals	- Entertainment, literary or artistic originals are the original films, sound recordings, manuscripts, tapes, models, etc, on which drama performances, radio and television programming, musical performances, sporting events, literary and artistic output, etc, are recorded or embodied.
Establishment	- An establishment is an enterprise, or part of an enterprise, that is situated in a single location and in which only a single (non-ancillary) productive activity is carried out or in which the principal productive activity accounts for most of the value added.
Expenditures	- Expenditures are the values of the amounts that buyers pay, or agree to pay, to sellers in exchange for goods or services that sellers provide to them or to other institutional units designated by the buyers.
Exports of goods	- Exports of goods consist of exports of the following items from residents to non-residents, generally with a change of ownership being involved: general

merchandise, goods for processing, goods procured in domestic ports by non-resident carriers, and non-monetary gold.

- Exports of services - Exports of services consist of the following services provided by residents to non-residents: transportation; travel; communications; construction; insurance; financial; computer and information; royalties and licence fees; other business services; personal, cultural, and recreational services; and government services n.i.e.
- Factor cost - Gross value added at factor cost is not a concept used explicitly in the System but it can easily be derived by subtracting the value of any taxes, less subsidies, on production payable out of gross value added.
- Final consumption - Final consumption consists of goods and services used up by individual households or the community to satisfy their individual or collective needs or wants.
- Final consumption expenditure of government - Government final consumption expenditure consists of expenditure, including imputed expenditure, incurred by general government on both individual consumption goods and services and collective consumption services.
- Final consumption expenditure of households - Household final consumption expenditure consists of the expenditure, including imputed expenditure, incurred by resident households on individual consumption goods and services, including those sold at prices that are not economically significant.
- Final consumption expenditure of NPISHs - Final consumption expenditure of NPISHs consists of the expenditure, including imputed expenditure, incurred by resident NPISHs on individual consumption goods and services.
- Financial auxiliaries - The financial auxiliaries sub-sector consists of all resident corporations and quasi-corporations engaged primarily in activities closely related to financial intermediation but which do not themselves perform an intermediation role.
- Financial corporations - The financial corporations sector consists of all resident corporations or quasi-corporations principally engaged in financial intermediation or in auxiliary financial activities which are closely related to financial intermediation.
- Financial enterprises - Financial enterprises are enterprises that are principally engaged in financial intermediation or in auxiliary financial activities which are closely related to financial intermediation.

- Financial intermediaries - Financial intermediaries are units which incur liabilities on their own account on financial markets by borrowing funds which they lend on different terms and conditions to other institutional units.

- Financial intermediation - Financial intermediation is a productive activity in which an institutional unit incurs liabilities on its own account for the purpose of acquiring financial assets by engaging in financial transactions on the market.

- Financial intermediation services indirectly measured (FISIM) - Financial intermediation services indirectly measured (FISIM) is an indirect measure of the value of financial intermediation services provided but for which financial institutions do not charge explicitly.

- Fixed assets - Fixed assets are tangible or intangible assets produced as outputs from processes of production that are they used repeatedly or continuously in other processes of production for more than one year.

- Foreign direct investment - Foreign direct investment is the category of international investment that reflects the objective of a resident entity in one economy to obtain a lasting interest in an enterprise resident in another economy; foreign direct investment is defined as ownership of 10 per cent or more of the ordinary shares or voting power (for an incorporated enterprise) or the equivalent (for an unincorporated enterprise).

- Functional classifications - Functional classifications provide a means of classifying, by purpose or socio-economic objective, certain transactions of producers and of three institutional sectors - namely households, general government and non-profit institutions serving households (NPISH)s.

- GDP - expenditure based - Expenditure-based GDP is total final expenditures at purchasers' prices (including the f.o.b. value of exports of goods and services), less the f.o.b. value of imports of goods and services.

- GDP - income based - Income-based GDP is compensation of employees, plus taxes less subsidies on production and imports, plus gross mixed income, plus gross operating surplus.

- GDP - output based - Output-based GDP is the sum of the gross values added of all resident producers at producers' prices, plus taxes less subsidies on imports, plus all non-deductible VAT (or similar taxes).

- GDP at market prices - GDP at market prices is the sum of the gross values added of all resident producers at producers' prices, plus taxes less subsidies on imports, plus all non-deductible VAT (or similar taxes).
- GNI (gross national income) - GNI (gross national income) is GDP less net taxes on production and imports, less compensation of employees less property income payable to the rest of the world plus the corresponding items receivable from the rest of the world (in other words, GDP less primary incomes payable to non-resident units plus primary incomes receivable from non-resident units); an alternative approach to measuring GNI at market prices is as the aggregate value of the balances of gross primary incomes for all sectors; (note that GNI is identical to gross national product (GNP) as previously used in national accounts generally).
- Goods - Goods are physical objects for which a demand exists, over which ownership rights can be established and whose ownership can be transferred from one institutional unit to another by engaging in transactions on markets.
- Goods and services account - The goods and services account shows for the economy as a whole and for groups of products, the total resources in terms of output and imports, and the uses of goods and services in terms of intermediate consumption, final consumption, gross capital formation and exports.
- Government final consumption expenditure - Government final consumption expenditure consists of expenditure, including imputed expenditure, incurred by general government on both individual consumption goods and services and collective consumption services.
- Gross - The term "gross" is a common means of referring to values before deducting consumption of fixed capital (generally used as in "gross capital stock" or "gross domestic product").
- Gross capital formation - Gross capital formation is measured by the total value of the gross fixed capital formation, changes in inventories and acquisitions less disposals of valuables for a unit or sector.
- Gross fixed capital formation - Gross fixed capital formation is measured by the total value of a producer's acquisitions, less disposals, of fixed assets during the accounting period plus certain additions to the value of non-produced assets (such as subsoil assets or major improvements in the quantity, quality or productivity of land) realised by the productive activity of institutional units.

- Gross national disposable income - Gross national disposable income may be derived from gross national income by adding all current transfers in cash or in kind receivable by resident institutional units from non-resident units and subtracting all current transfers in cash or in kind payable by resident institutional units to non-resident units.
- Gross national income (GNI) - Gross national income (GNI) is GDP less net taxes on production and imports, less compensation of employees less property income payable to the rest of the world plus the corresponding items receivable from the rest of the world (in other words, GDP less primary incomes payable to non-resident units plus primary incomes receivable from non-resident units); an alternative approach to measuring GNI at market prices is as the aggregate value of the balances of gross primary incomes for all sectors; (note that gross national income is identical to gross national product (GNP) as previously used in national accounts generally).
- Gross saving - Gross saving is gross disposable income less final consumption expenditure.
- Gross value added - Gross value added is the value of output less the value of intermediate consumption; it is a measure of the contribution to GDP made by an individual producer, industry or sector.
- Gross value added at basic prices - Gross value added at basic prices is output valued at basic prices less intermediate consumption valued at purchasers' prices.
- Gross value added at producers' prices - Gross value added at producers' prices is output valued at producers' prices less intermediate consumption valued at purchasers' prices.
- Historic cost accounting - Historic cost accounting is a valuation method which requires goods or assets used in production to be valued by the expenditures actually incurred to acquire those goods or assets, however far back in the past those expenditures took place.
- Holding gains - Positive or negative holding gains may accrue during the accounting period to the owners of financial and non-financial assets and liabilities as a result of a change in their prices (holding gains are sometimes referred to as "capital gains").
- Household final consumption expenditure - Household final consumption expenditure consists of the expenditure, including imputed expenditure, incurred by resident households on individual consumption goods and services, including those sold at prices that are not economically significant.

Illegal production	- Illegal production is the production of goods or services whose sale, distribution or possession is forbidden by law; and production activities which are usually legal but which become illegal when carried out by unauthorised producers; the scope of illegal production varies depending on the laws in place in individual countries (e.g., prostitution is legal in some countries but illegal in others).
Income	- Income is the maximum amount that a household, or other unit, can consume without reducing its real net worth.
Income from abroad - net	- Net income from abroad is the difference between the total values of the primary incomes receivable from, and payable to, non-residents.
Industry	- An industry consists of a group of establishments engaged on the same, or similar, kinds of production activity; the classification of productive activities used in the System is ISIC (Rev.3).
Institutional sectors	- Institutional units are grouped together to form institutional sectors, on the basis of their principal functions, behaviour, and objectives.
Institutional unit	- An institutional unit is an economic entity that is capable, in its own right, of owning assets, incurring liabilities and engaging in economic activities and in transactions with other entities.
Insurance	- The activity of insurance is intended to provide individual institutional units exposed to certain risks with financial protection against the consequences of the occurrence of specified events; it is also a form of financial intermediation in which funds are collected from policyholders and invested in financial or other assets which are held as technical reserves to meet future claims arising from the occurrence of the events specified in the insurance policies.
Insurance corporations	- Insurance corporations consist of incorporated, mutual and other entities whose principal function is to provide life, accident, sickness, fire or other forms of insurance to individual institutional units or groups of units.
Insurance technical reserves	- The technical reserves held by insurance enterprises consist of the actuarial reserves against outstanding risks in respect of life insurance policies, including reserves for with-profit policies which add to the value on maturity of with-profit endowments or similar policies, prepayments of premiums and reserves against outstanding claims.

Intangible fixed assets	-	Intangible fixed assets are non-financial produced fixed assets that mainly consist of mineral exploration, computer software, entertainment, literary or artistic originals intended to be used for more than one year.
Intangible non-produced assets	-	Intangible non-produced assets are assets that entitle their owners to engage in certain specific activities or to produce certain specific goods or services and to exclude other institutional units from doing so except with the permission of the owner (e.g., patented entities or purchased goodwill).
Integrated economic accounts	-	The integrated economic accounts comprise the full set of accounts of institutional sectors and the rest of the world, together with the accounts for transactions (and other flows) and the accounts for assets and liabilities.
Interest	-	Interest is the amount that the debtor becomes liable to pay to the creditor over a given period of time without reducing the amount of principal outstanding, under the terms of the financial instrument agreed between them.
Intermediate consumption	-	Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production, excluding fixed assets whose consumption is recorded as consumption of fixed capital; the goods or services may be either transformed or used up by the production process.
Inventories	-	Inventories consist of stocks of outputs that are still held by the units that produced them prior to their being further processed, sold, delivered to other units or used in other ways and stocks of products acquired from other units that are intended to be used for intermediate consumption or for resale without further processing.
Inventories - changes in (including work-in-progress)	-	Changes in inventories (including work-in-progress) are measured by the value of the entries into inventories less the value of withdrawals and the value of any recurrent losses of goods held in inventories.
Inventories of work-in-progress on cultivated assets	-	Inventories of work-in-progress on cultivated assets consist of livestock raised for products yielded only on slaughter, such as fowl and fish raised commercially, trees and other vegetation yielding once-only products on destruction and immature cultivated assets yielding repeat products.
ISIC	-	ISIC is the United Nations International Standard Industrial Classification of All Economic Activities; the third revision of ISIC is used in the 1993 SNA.
Kind-of-activity unit	-	A kind-of-activity unit is an enterprise, or a part of an enterprise, which engages

in only one kind of (non-ancillary) productive activity or in which the principal productive activity accounts for most of the value added.

- Land
- Land is the ground, including the soil covering and any associated surface waters, over which ownership rights are enforced.
- Machinery and equipment (assets)
- Machinery and equipment (assets) consist of transport equipment and other machinery and equipment other than that acquired by households for final consumption.
- Maintenance and repairs (of fixed assets)
- Ordinary maintenance and repairs of fixed assets are activities that owners or users of fixed assets are obliged to undertake periodically in order to be able to utilise assets over their expected service lives (they are current costs that cannot be avoided if the fixed assets are to continue to be used); maintenance and repairs do not change the fixed asset or its performance, but simply maintain it in good working order or restore it to its previous condition in the event of a breakdown (note the contrast between this item and "major renovations or enlargements").
- Major renovations or enlargements (of fixed assets)
- Major renovations or enlargements of fixed assets are activities which increase the performance or capacity of existing fixed assets or significantly extend their previously expected service lives; the decision to renovate, reconstruct or enlarge a fixed asset is a deliberate investment decision which may be undertaken at any time and is not dictated by the condition of the asset (note the contrast between this item and "maintenance and repairs").
- Margin (trade)
- A trade margin is the difference between the actual or imputed price realised on a good purchased for resale (either wholesale or retail) and the price that would have to be paid by the distributor to replace the good at the time it is sold or otherwise disposed of.
- Margin (transport)
- A transport margin consists of those transport charges paid separately by the purchaser in taking delivery of the goods at the required time and place.
- Market output
- Market output is output that is sold at prices that are economically significant or otherwise disposed of on the market, or intended for sale or disposal on the market.
- Market prices
- Market prices for transactions are the amounts of money willing buyers pay to acquire something from willing sellers.

Mineral exploration	- Mineral exploration consists of the value of expenditures on exploration for petroleum and natural gas and for non-petroleum deposits.
Mixed income	- Mixed income is the surplus or deficit accruing from production by unincorporated enterprises owned by households; it implicitly contains an element of remuneration for work done by the owner, or other members of the household, that cannot be separately identified from the return to the owner as entrepreneur but it excludes the operating surplus coming from owner-occupied dwellings.
Monetary gold	- Monetary gold is gold owned by the monetary authorities or others subject to their effective control that is held as a financial asset and as a component of foreign reserves.
National income	- National income is the total value of the primary incomes receivable within an economy less the total of the primary incomes payable by resident units.
Net	- The term "net" is a common means of referring to values after deducting consumption of fixed capital (generally used as in "net capital stock" or "net domestic product"); it should be noted, however, that the term "net" can be used in different contexts in the national accounts, such as "net income from abroad" which is the difference between two income flows.
Net domestic product (NDP)	- Net domestic product (NDP) is obtained by deducting the consumption of fixed capital from gross domestic product.
Net fixed capital formation.	- Net fixed capital formation consists of gross fixed capital formation less consumption of fixed capital.
Net income from abroad	- The difference between the total values of the primary incomes receivable from, and payable to, non-residents is often described as net income from abroad.
Net national income	- The aggregate value of the balances of net primary incomes summed over all sectors is described as net national income.
Net saving	- Net saving is net disposable income less final consumption expenditure.
Net value added	- Net value added is the value of output less the values of both intermediate consumption and consumption of fixed capital.
Net worth	- Net worth is the value of all the non-financial and financial assets owned by an

institutional unit or sector less the value of all its outstanding liabilities; it is a measure of the wealth of a unit or sector at a point in time.

- Non-financial assets - Non-financial assets are entities, over which ownership rights are enforced by institutional units, individually or collectively, and from which economic benefits may be derived by their owners by holding them, or using them over a period of time, that consist of tangible assets, both produced and non-produced, and most intangible assets for which no corresponding liabilities are recorded.

- Non-financial corporations - Non-financial corporations are corporations whose principal activity is the production of market goods or non-financial services.
- Non-financial quasi-corporations - Non-financial quasi-corporations are quasi-corporations whose principal activity is the production of market goods or non-financial services.

- Non-life insurance premiums - Non-life insurance premiums comprise both the actual premiums payable by policyholders to obtain insurance cover during the accounting period (premiums earned) and the premium supplements payable out of the property income attributed to insurance policyholders, but excluding social contributions.

- Non-market producers - Non-market producers are producers that provide most of their output to others free or at prices which are not economically significant.

- Non-profit institutions (NPIs) - Non-profit institutions (NPIs) are legal or social entities created for the purpose of producing goods and services whose status does not permit them to be a source of income, profit or other financial gain for the units that establish, control or finance them.

- Non-profit institutions controlled and mainly financed by government - Non-profit institutions controlled and mainly financed by government are properly constituted legal entities which exist separately from government but which are financed mainly by government and over which government exercises control.

- Non-profit institutions engaged in market production - Non-profit institutions engaged in market production consist of those NPIs which charge fees determined by their costs of production and which are sufficiently high to have a significant influence on the demand for their services, but any surpluses such institutions make must be retained within those institutions as their status as "Non-profit institutions (NPIs)" prevents them from distributing them to others

- Non-profit institutions - Non-profit institutions engaged in non-market production are NPIs that are

engaged in non-market production	incapable of providing financial gain to the units which control or manage them, and which must rely principally on funds other than receipts from sales to cover their costs of production or other activities.
Non-profit institutions serving households (NPISHs)	- Non-profit institutions serving households (NPISHs) consist of NPIs which are not financed and controlled by government and which provide goods or services to households free or at prices that are not economically significant.
Non-residential buildings	- Non-residential buildings are buildings other than dwellings, including fixtures, facilities and equipment that are integral parts of the structures and costs of site clearance and preparation.
Operating surplus	- The operating surplus measures the surplus or deficit accruing from production before taking account of any interest, rent or similar charges payable on financial or tangible non-produced assets borrowed or rented by the enterprise, or any interest, rent or similar receipts receivable on financial or tangible non-produced assets owned by the enterprise; (note: for unincorporated enterprises owned by households, this component is called "mixed income").
Output	- Output consists of those goods or services that are produced within an establishment that become available for use outside that establishment, plus any goods and services produced for own final use.
Perpetual inventory method (PIM)	- The perpetual inventory method (PIM) is a method of constructing estimates of capital stock and consumption of fixed capital from time series of gross fixed capital formation; it allows an estimate to be made of the stock of fixed assets in existence and in the hands of producers which is generally based on estimating how many of the fixed assets installed as a result of gross fixed capital formation undertaken in previous years have survived to the current period.
PPP (purchasing power parity)	- A PPP (purchasing power parity) is a price relative which measures the number of units of country B's currency that are needed in country B to purchase the same quantity of an individual good or service as 1 unit of country A's currency will purchase in country A.
Primary incomes	- Primary incomes are incomes that accrue to institutional units as a consequence of their involvement in processes of production or ownership of assets that may be needed for purposes of production.
Produced assets	- Produced assets are non-financial assets that have come into existence as outputs from processes that fall within the production boundary of the SNA.

- Producer's price - The producer's price is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any VAT, or similar deductible tax, invoiced to the purchaser; it excludes any transport charges invoiced separately by the producer.
- Production - Production is an activity, carried out under the responsibility, control and management of an institutional unit that uses inputs of labour, capital and goods and services to produce outputs of other goods and services.
- Production account - The production account records the activity of producing goods and services as defined within the SNA; its balancing item, gross value added, is a measure of the contribution to GDP made by an individual producer, industry or sector.
- Production boundary - The production boundary includes all production actually destined for the market, whether for sale or barter, all goods or services provided free to individual households or collectively to the community by government units or NPISHs, all goods produced for own final use, own-account production of housing services by owner occupiers and services produced by employing paid domestic staff.
- Property income - Property income is the income receivable by the owner of a financial asset or a tangible non-produced asset in return for providing funds to or putting the tangible non-produced asset at the disposal of, another institutional unit; it consists of interest, the distributed income of corporations (i.e., dividends and withdrawals from income of quasi-corporations), reinvested earnings on direct foreign investment, property income attributed to insurance policy holders, and rent.
- Property income attributed to insurance policyholders - The property income attributed to insurance policyholders is the investment income receivable by insurance enterprises on insurance technical reserves; it is shown in the accounts as being paid by the insurance enterprises to the insurance policyholders because the technical reserves are assets of the policyholders.
- Purchaser's price - The purchaser's price is the amount paid by the purchaser, excluding any deductible VAT or similar deductible tax, in order to take delivery of a unit of a good or service at the time and place required by the purchaser; the purchaser's price of a good includes any transport charges paid separately by the purchaser to take delivery at the required time and place.

Quasi-corporations	- Quasi-corporations are unincorporated enterprises that function as if they were corporations, and which have complete sets of accounts, including balance sheets.
Reference rate (of interest)	- The reference rate (of interest) is the pure cost of borrowing funds (i.e. a rate from which the risk premium has been eliminated to the greatest extent possible and which does not include any intermediation services).
Reinvested earnings on direct foreign investment	- Reinvested earnings on direct foreign investment consist of the retained earnings of a direct foreign investment enterprise and which are treated as if they were distributed and remitted to foreign direct investors in proportion to their ownership of the equity of the enterprise and then reinvested by them in the enterprise.
Rent	- Rent is the sum of rents on land and rents on subsoil assets.
Research and development	- Research and development by a market producer is an activity undertaken for the purpose of discovering or developing new products, including improved versions or qualities of existing products, or discovering or developing new or more efficient processes of production.
SAM (social accounting matrix)	- A SAM (social accounting matrix) is a means of presenting the SNA accounts in a matrix which elaborates the linkages between a supply and use table and institutional sector accounts; a typical focus of a SAM on the role of people in the economy may be reflected by, among other things, extra breakdowns of the household sector and a disaggregated representation of labour markets (i.e., distinguishing various categories of employed persons).
Satellite accounts	- Satellite accounts provide a framework linked to the central accounts and which enables attention to be focused on a certain field or aspect of economic and social life in the context of national accounts; common examples are satellite accounts for the environment, or tourism, or unpaid household work.
Saving	- Saving is disposable income less final consumption expenditure (or adjusted disposable income less actual final consumption, after taking account of an adjustment for pension funds); saving is an important aggregate which can be calculated for each institutional sector.
Services	- Services are outputs produced to order and typically consist of changes in the conditions of the consuming units realised by the activities of producers at the

		demand of the consumers; by the time their production is completed they must have been provided to the consumers.
Single indicator method of deflation	-	A single indicator method of deflation is a means of estimating the volume movements of value added directly using only one time series instead of double deflation.
SNA (System of National Accounts)	-	The System of National Accounts (SNA) consists of a coherent, consistent and integrated set of macroeconomic accounts, balance sheets and tables based on a set of internationally agreed concepts, definitions, classifications and accounting rules.
Stocks	-	Stocks are a position in, or holdings of, assets and liabilities at a point in time and the System records stocks in accounts, usually referred to as balance sheets, and tables at the beginning and end of the accounting period; stocks result from the accumulation of prior transactions and other flows, and they are changed by transactions and other flows in the period (note that stocks of goods are referred to as "inventories" in the System).
Straight-line depreciation	-	Straight-line depreciation is a depreciation profile based on a constant annual amount of capital consumption over the life of the asset.
Subsidies	-	Subsidies are current unrequited payments that government units, including non-resident government units, make to enterprises on the basis of the levels of their production activities or the quantities or values of the goods or services which they produce, sell or import.
Subsidies on losses of government trading organisations	-	Subsidies on losses of government trading organisations consist of the losses incurred by government trading organisations whose function is to buy and sell the products of resident enterprises; when such organisations incur losses as a matter of deliberate government economic or social policy by selling at lower prices than those at which they purchased the goods, the difference between the purchase and the selling prices should be treated as a subsidy.
Tangible fixed assets	-	Tangible fixed assets are non-financial produced assets that consist of dwellings; other buildings and structures; machinery and equipment and cultivated assets.
Tangible non-produced assets	-	Tangible non-produced assets are natural assets - land, subsoil assets, non-cultivated biological resources and water resources - over which ownership may be established and transferred
Total economy	-	The total economy consists of all the institutional units which are resident in the

economic territory of a country.

- Trade margin
- A trade margin is the difference between the actual or imputed price realised on a good purchased for resale (either wholesale or retail) and the price that would have to be paid by the distributor to replace the good at the time it is sold or otherwise disposed of.
- Unit value index
- A unit value index is a "price" index which measures the change in the average value of units that are not homogeneous and which may therefore be affected by changes in the mix of items as well as by changes in their prices.
- Valuables
- Valuables are produced assets that are not used primarily for production or consumption, that are expected to appreciate or at least not to decline in real value, that do not deteriorate over time under normal conditions and that are acquired and held primarily as stores of value.
- Volume index
- A volume index (also called a "quantity index") is most commonly presented as an average of the proportionate changes in the quantities of a specified set of goods or services between two periods of time; volume indices may also compare the relative levels of activity in different countries (e.g., those calculated using PPPs).
- Wages and salaries
- Wages and salaries consist of the sum of wages and salaries in cash and wages and salaries in kind.
- Wages and salaries in cash
- Wages and salaries in cash consist of wages or salaries payable at regular weekly, monthly or other intervals, including payments by results and piecework payments; plus allowances such as those for working overtime; plus amounts paid to employees away from work for on holiday; plus ad hoc bonuses and similar payments; plus commissions, gratuities and tips received by employees.
- Wages and salaries in kind
- Wages and salaries in kind consist of remuneration in the form of goods and/or services that are not necessary for work and can be used by employees in their own time, and at their own discretion, for the satisfaction of their own needs or wants or those of other members of their households.
- Work-in-progress inventories
- Inventories of work-in-progress consist of goods and services that are partially completed but that are not usually turned over to other units without further processing or that are not mature and whose production process will be continued in a subsequent period by the same producer.
- Work-in-progress on
- Inventories of work-in-progress on cultivated assets consist of livestock raised

cultivated assets for products yielded only on slaughter, including fowl and fish raised
inventories commercially, trees and other vegetation yielding once-only products on
destruction and immature cultivated assets yielding repeat products.
